Cookie Information

NameASP.NET_SessionId	**Type** Session	**Domain** microsites.lincolnshire.gov.uk	**Expires** At end of session

When you navigate to the site, the server establishes a unique session for you that lasts for the duration of your visit. For each session, ASP.NET maintains session state information where applications can store user-specific information.

ASP.NET must track a session ID for each user so that it can map the user to session state information found on the server. By default, ASP.NET uses a non-persistent cookie to store the session state. However, if a user has disabled cookies on the browser, session state information cannot be stored in a cookie.

The information stored on the server will remain in the server's memory until the session is either explicitly removed or expired (by default a session expires after 20 minutes of inactivity).

The cookie itself contains no personal information.
